

# Welding machines from Woltersdorf

## THE NEW WIRE FEEDER

### M 41

M41 is a separate wire feeder for MIG/MAG welding, operated from DC power source welding voltage ("off the arc" operation). The machine is working with all CC and CV welding power sources. Even old MMA welding rectifier or generator can be used for productive MAG welding, particularly with Innershield® wire. The machine is very robust, light, compact and excellent for mobile building site. Field of applications are rail welding, construction trade, shipbuilding, installation work in steel building, plant construction etc.

#### Technische Daten

Artikel Nr.	11233
Anschlußspannung DC	20-100 V (DC)
Ausgangsleistung	400 A/ 100%
DV-Geschwindigkeit	1-18 m/min.
Ø Fülldraht	1,2-2,4 mm
Ø Massivdraht	1,0-1,6 mm
Brenneranschluss	EURO
Gewicht	12 kg
Abmessung (LxBxH)	520x200x410 mm
Schutzart	IP 23 S
Norm	IEC 60974-1,2,10 / CE / S

Manufactured by :
